

Samuel Ohiani

Software Engineer | Backend and Full Stack

ohianisammy2005@gmail.com · LinkedIn · GitHub · Portfolio

Software engineer building backend APIs and full stack products, from payment integrations and transaction flows to user-facing tools.

EXPERIENCE

Resilience 17 | Software Engineer Dec 2025 – Present

- Integrated five provider APIs for Nuvion: PayPal/Venmo, Checkout.com, Rapyd, Fiserv and emerchantpay; extended Worldpay with Google Pay and chargeback flows.
- Built seller onboarding and payment flows spanning 3DS, captures, refunds and signed webhooks; exposed the next required action on payment intents.
- Standardized provider errors, hardened timeout and retry handling, and added repeatable sandbox scenarios for QA.

Rivo (Low Gravity) | Software Engineer May 2025 – Sep 2026

- Built fiat and crypto wallet APIs for Rivo and Rivo Business, including deposits, swaps, transfers, KYB onboarding, payment links and team permissions.
- Fixed settlement, balance and webhook issues, including duplicate deposit notifications; reported backend-related issues fell 40% during my tenure.
- Delivered recent-recipient and refund flows and supported production deployments.

Precise Financial Systems | Backend Developer Intern Mar – Aug 2024

- Debugged and updated .NET services in a financial software environment through guided code reviews.

Unified Payment Services Limited | Backend Developer Intern Mar – Sep 2024

- Investigated JavaScript and Node.js payment API endpoints and applied fixes with a lead engineer.

SELECTED PROJECTS

Qualiflow | Independent full stack project

- Built a CSV lead-scoring app with adjustable criteria and explanations for each ranking; kept imports in memory and escaped exported cells to prevent spreadsheet formulas from running.

Iraid | Frontend and content workflow

- Built the frontend and a Sanity-managed gallery so the team can update images and captions without a code release.

HebronBites | Backend project

- Built campus food ordering features for menus, orders, ratings and delivery tracking with Node.js, Express, PostgreSQL, Sequelize and Paystack.

TECHNICAL SKILLS

Languages and frameworks TypeScript, JavaScript, Python, Node.js, NestJS, Express, React, Next.js, .NET

Data and delivery PostgreSQL, MongoDB, Redis, Supabase, AWS, Docker, Git, Swagger, Postman

EDUCATION

B.Sc. Computer Science | Covenant University
